Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Honey: a Novel Treatment in Chronic Ear Infections

Darius Henatsch, Maastricht, 6 september 2019

1. Honey is an effective and safe treatment alternative in a range of conditions in otorhinolaryngology. (This thesis)
2. The coverage of chronically infected open mastoid cavities differs and reveals treatment success. (This thesis)
3. Medical honey should be considered as a standard treatment strategy for patients who suffer from chronically discharging open mastoid cavities. (This thesis)
4. The formation of oxygen radicals by α -oxaldehyde dependent mechanisms is perhaps the most important property of medical honey. (This thesis)
5. The translation from in vitro studies to in vivo work comes with errors.
6. Antibiotic resistance is one of the biggest threats to global health, food security, and development today. (World Health Organization)
7. You have a bee to thank for every one in three bites of food you eat. (Greenpeace)
8. Only crazy doctors operate on crazy patients. (Dr. John Hamilton)
